Flytipping Removal

Expert Clearance Specialists

We provide a fast, compliant solution for the removal of unplanned waste and fly-tipping, helping you restore sites quickly and safely. Whether it's dumped rubbish, construction debris or bulky waste, our team can mobilise at short notice with the right equipment to clear the area efficiently and minimise disruption.

Recycling Centre Rainham MRF

✓ Extracting Valuable Commodities

Our fully licensed Rainham MRF holds a permit to process 300,000 tonnes of material. We operate 3 key recycling operations: a Picking line to remove commodities that would otherwise go to landfill. Shredder to turn the residual waste to SRF to be burnt for energy and a washplant to turn inert into recycled aggregates.

✓ Multi-Stream Waste Processing and Recycling

We process and recycle many different waste streams to boost and incentivise recycling. We encourage other licensed waste carriers to use our facility to ensure waste is correctly processed and recycled. Get in touch to start tipping with us today.

Don't see your waste stream? Contact us to discuss a tailored solution.

Recycled Aggregate Rainham Washplant

Our washed recycled aggregates are produced from carefully selected inert construction materials that are processed through our state-of-the-art wash plant to create clean, consistent sand and stone products. The material is washed, screened and graded. This delivers a robust, sustainable alternative to primary aggregates.
